

Fibrous dysplasia lesion*
 *Diagnosis Radiologically and/or histologically (including Gnas mutation in Craniofacial (CFD) or mono-ostotic Fibrous dysplasia)

CFD?

Yes
 See CFD algorithm

Abnormal?
 See Endocrine Algorithm

Yes
 See Pain in FD algorithm

Scintigraphy
 X-ray of affected sites
 If located in vertebrae: assess scoliosis

Extraskelatal Assessment:
 Endocrine, Dermatological,
 Quality of life

Pain?

Mono-ostotic

Polyostotic

Skeletal immaturity:
 Annual checks
Skeletal Mature: Follow up clinical and radiological at 24 months

Change in lesion or FD related complaints?

Refer to specialized Center

Skeletal immaturity:
 Annual checks

Skeletal Mature:
 Follow up clinical and radiological at 24-36 months

Change in lesion or FD related complaints?

Follow up primary care doctor

Algorithm for Skeletal evaluation
